PROFESSIONAL SUMMARY

DevOps Engineer with 4+ years in production cloud operations for iGaming and SaaS platforms. I architect AWS and Azure environments end to end with Terraform, build fast, secure CI/CD, and run observability and incident response for 30 production clients and 400+ services where downtime costs money. Daily user of AI-assisted workflows (mainly Claude, plus Codex, OpenCode, Cursor). English C1. Available now for part-time or B2B work via my own company.

TECHNICAL SKILLS

AWS: EC2, ECS, ECR, Lambda, API Gateway, CloudFront, WAF, Athena, CloudWatch, IAM, SSM, VPC
Azure: Function Apps, APIM, Front Door, Cosmos DB, Key Vault, Managed Identity, Service Bus
IaC: Terraform (modules, remote state, multi-environment), AWS CDK
CI/CD & Containers: GitHub Actions, GitLab CI/CD, Docker, Kubernetes, Helm, Argo CD (GitOps side project)
Observability & Reliability: Grafana, Prometheus, Alloy, Loki, Datadog, Zabbix, Kibana, UptimeRobot, Pingdom
Networking & Security: WireGuard, DNS, Cloudflare, Traefik, Keycloak, OAuth2 Proxy, Trivy, Gitleaks, GitHub OIDC
Data & Scripting: PostgreSQL, Prisma, SQL, Redis/Valkey, Linux, Bash
AI-Assisted Engineering: Claude (primary), Codex, OpenCode, Cursor; multi-agent workflows for infra and CI/CD

PROFESSIONAL EXPERIENCE

The Unit | DevOps Engineer · Full-time, Remote · Apr 2026 – Present

- Own AWS infrastructure for multiple clients, dev to prod, with Terraform and CDK; run **50–100 containers**.
- Build and operate Azure workloads: Function Apps, APIM, Front Door, Cosmos DB, Key Vault, Service Bus.
- Standardized Terraform: reusable modules, locked per-env state, pinned providers, plan on PR, apply on merge.
- Own ~20 GitHub Actions and GitLab CI/CD workflows; **cut deploy time from ~10 to ~2 min** through dependency and Docker layer caching, parallel jobs, path filters and right-sized runners.
- **Reduced dev environment spend by ~40%** with Spot capacity, rightsizing, off-hours shutdown, and removal of orphaned EBS volumes, idle Elastic IPs, old snapshots and unused load balancers.
- Run the company-wide WireGuard VPN for **150+ users** and high-availability DNS across hybrid cloud.

B2B2C SaaS iGaming Platform | DevOps Engineer / Architect · Independent B2B engagement · Feb 2026 – Present

- Architected the complete AWS platform for a modular B2B2C iGaming marketplace, frontend to backend.
- Built persistent and disposable Terraform stacks: VPC, least-privilege IAM, ECR, ECS Service Connect, Valkey, SSM.
- Automated changed-service-only ECS deploys with digest-pinned images for instant rollback and Prisma migrations.
- Enforced security gates with Trivy, Gitleaks and keyless GitHub OIDC across all delivery pipelines.

Aristocrat Interactive | TechOps Engineer · Jan 2025 – Mar 2026

- Provided shift-based SRE for **30 production clients and 400+ services**, resolving failed bets, outages and 5xx spikes to protect revenue.
- Led the Terraform migration from Pingdom to UptimeRobot for 100+ sites, cutting alert delay from 2–3 min to real time.
- Owned incident response at **99.9% uptime**, fixing root causes to prevent repeat incidents and writing postmortems.
- Wrote runbooks, documentation and team standards, and onboarded new engineers.
- Built **200+ alarms** in Datadog, CloudWatch and Kibana; cut false alerts and moved AWS alarms to Terraform.
- Automated Redis flushes and password resets through Jira and AWS, **eliminating 150+ manual tickets**.

BtoBet | Software Engineer · Aug 2022 – Dec 2024

- Launched AWS web and API environments for **50+ new clients** (1–2 weeks each) and wrote migration SQL.

EDUCATION & CERTIFICATIONS

University American College Skopje | BSc Software Engineering | 2019 – 2022
AWS Cloud Practitioner (CLF-C02) · Architecting on AWS · Cloud Operations on AWS · Grafana Foundations
